Python (Programming Language)

MLOps

Machine Learning

Certifications

Databricks Certified Machine Learning Associate

Microsoft DP-200T01 - Implementing an Azure Data Solution

Microsoft Certified: Azure AI Fundamentals

Microsoft Certified: Azure Data Engineer Associate

Microsoft Certified: Azure AI Engineer Associate

Aiden Krain

Senior Consultant - Data Science at Fujitsu
Carnegie, Victoria, Australia

Summary

As a technology professional, I have spent my career supporting and improving technology services in both the public and private sector. During that time I have been involved in various aspects of the project life cycle from concept through to implementation, maintenance and support across different platforms and technologies. As a Senior Consultant, I have managed multiple projects across multiple teams and vendors and I am able to communicate effectively with my team members and business stakeholders alike while remaining focused on the end objective to deliver best outcomes for the customer and my organisation. Over my time, I have gained deep exposure to the Power Platform (Power Apps, Power Automate, Power BI), SQL Server, Azure Synapse Analytics, Azure Data Factory, Azure Databricks, Azure Data Storage, and Dev Ops. I am primarily focussed now on AI ML solutions using technologies and practices including: MLOps, Generative AI, RAG, Databricks, Agentic AI, Mlflow, LangGraph, PySpark, DevOps.

Experience

Fujitsu Asia Pacific

2 years 6 months

Senior Consultant - Data Science

January 2025 - Present (9 months)

Melbourne, Victoria, Australia

Project 1 - MLOps Accelerator:

- Developed a fully operational MLOps accelerator that can be injected into most ML projects.
- Contains key ML components including feature engineering, model training, model inference, model evaluation, model deployment, drift detection/alerting and automated retraining.
- Developed in PySpark, in an object-oriented fashion within Databricks for ability to use python files as modules.

- Automated deployment to higher environments via Databricks jobs and GitHub actions.

Project 2 - Generative AI Accelerator:

- Assisted development of Fujitsu Generative AI accelerator through extension of current capabilities.
- Developed the agentic memory capability for the Gen AI solution to store and retrieve memories to augment document search.
- Enhanced system prompts to better support the agent profiles to perform required tasks.

Project 3 -Generative AI Analysis:

- Analysed free-text fields within ServiceNow tickets to determine whether a technician was required to attend the site to resolve the reported issue.
- Utilised the ChatGPT API (within an Open AI deployment) via Databricks to prompt the LLM to classify incoming SNOW ticket data to determine whether an on-site technician was required.

Project 4 - MLOps Implementation:

- Implemented an end-to-end MLOps framework in Databricks to standardise and productionise the client's machine learning models.
- Utilised best practice ML concepts and technologies including MLflow, Unity Catalog, and LAkehouse monitoring to future proof the solution.
- Ran stakeholder engagement workshops to fully understand the requirements and expectations from the business.
- Designed the MLOps solution in accordance with the client's platform architecture and coordinated with multiple teams to satisfy the architecture committee and deliver a long-lasting solution.

Consultant - Advanced Analytics & Data Platforms

April 2023 - December 2024 (1 year 9 months)

Melbourne, Victoria, Australia

Project 1 - Azure Synapse Data Engineering:

- Implemented an ADF accelerator that was fully parameterised with the ability to connect to various source systems and process several file types.
- Established medallion architecture in Azure Synapse Analytics using PySpark.
- Utilised streaming autoloader for ingestion, SQL techniques for data processing, and MERGE INTO for data output.

- Exposure to DevSecOps through automated code deployment in Azure DevOps.

Project 2 - PowerApps & Advanced SQL Development:

- Fully managed enhancements and deployment of a complex PowerApps application that allowed users to manage existing or create new Power BI paginated reports.
- Built complex Power Automate flows that connected to application to send Json data to SQL backend as well as to send reports to users.
- Report metadata was stored in SQL tables that drove the PowerApps application, which then utilised SQL Server stored procedures to update complex DAX logic for report generation.
- Spearheaded modularisation of the existing Azure Synapse data warehouse by breaking extremely complex business logic within stored procedures into smaller chunks for faster processing.
- Advanced my SQL development skills by building new fields into new and existing modules.

Project 3 - ML Labour Analysis:

- Engaged key stakeholders at a particular warehouse for the labour analysis case study to determine requirements and data for the project.
- Conducted exploratory data analysis, feature engineering and basic AutoML model fitting via databricks to determine how the site can reduce labour cost.
- Presented findings back to key stakeholders and provided insights for extrapolation to other sites.

Project 4 - Power BI Reporting:

- Internal Fujitsu project commissioned by the government of NSW.
- Built Power BI dashboard for location data related to drone captures of wild Kangaroo's in rural NSW.

Versor

Consultant - Advanced Analytics & Data Platforms

April 2022 - March 2023 (1 year)

Australia

Project 1 - Power BI Reporting:

- Built numerous Power BI reports to demonstrate key sales findings to the A2 management.
- Developed complex DAX queries to feed key measures in Power BI reports.

- Maintained and extended the underlying Power BI dataset using DAX studio, Tabular Editor and ALM Toolkit.
- Employed data control measures including data partitioning and Power BI scheduled refresh.
- Deployed new Power BI artifacts via deployment pipelines through different environments.

Project 2 - Power Platform Development:

- Refreshed and updated all dashboards (over 100 visuals) for each supervisor/manager within one site with new data and measures.
- Required to liaise with many different supervisors of varying areas to determine key metrics for each role.
- Built PowerApps application to keep track of and create actions for management and supervisors to complete.
- Created Power BI dataset, and dashboard for HRBP team using complex measures to boost productivity and efficiency within the team.

Project 3 - ADF/SQL Development:

- Enriched existing data tables to include new marketplace data for downstream reporting.
- Enhanced existing ADF orchestration pipelines to parametrise and move data more efficiently for future workloads.
- Developed new fields and transformation logic within SQL stored procedures to process new marketplace data.

The Salvation Army

Deployment Analyst

July 2019 - April 2022 (2 years 10 months)

Melbourne, Victoria, Australia

Throughout this role I have undertaken a large variety of tasks, projects, and responsibilities. I actively coordinated with other IT teams to deploy new images as well as interact with customers to produce a high-quality deployment service nationally. Additionally, I have delivered on key financial data integration projects, efficiently moving, and transforming data to and from ServiceNow, Coupa, TechOne and SQL databases. I have also been involved in PowerApp development, aiding the organisation in reducing time and costs in processing vehicle infringements.

- Built key data integrations between our purchasing platform Coupa and TechOne, leveraging Azure Data Factory, SQL, and APIs to manipulate and transform data for efficient ingestion.

- Provisioned services and resources via the Azure portal.
- Used a wide variety of Azure services including Azure Data Factory, SQL Server, Logic Apps, AAD, Graph API, Blob Storage, Azure Functions, Databricks, Azure ML Studio, Azure Synapse Analytics, Cosmos DB, Azure DevOps.
- Coordinated with other TSA staff and consulting companies to design and implement strategic data integrations.
- Aided in developing a PowerApp using Power Automation and AI builder to improve the speed of processing vehicle infringements.
- Travelled interstate to Microsoft to work with Power Platform experts on the above PowerApp.
- Troubleshooting and deploying Windows 10 images via SCCM and PowerShell scripts.
- Working with customers to organise and book reimages and device pickups.
- Expertise in ticket management via ServiceNow to troubleshoot and resolve a range of IT problems including hardware issues, network and switch issues, application support, software installations, server management and site visits.
- Utilised Power BI to develop insightful dashboards using key data.
- Use of Jupyter Notebooks for Python data analysis.
- Experience in user and domain server management via Active Directory.

Education

Monash University

Master of Data Science, Information Technology · (2020 - 2023)

Monash University

Bachelor's degree, Biomedical Sciences, Astrophysics · (2015 - 2019)
